Re: Needing contents of /opt/zimbra/log/mailbox.log to send to remote syslog

You can enable logging to syslog via the attribute zimbraLogToSyslog. That will log to localhost using the local0 facility.

That said, you should really upgrade your version of Zimbra.

Thanks. Finally figured it out, we actually needed to syslog to a remote host, so (for anyone else looking to do this) I edited the two files:

    /opt/zimbra/conf/log4j.properties
    /opt/zimbra/conf/log4j.properties.in
